

Propelled Technologies Capability Statement

Services Offered

Cybersecurity

Our team has implemented automation for database and middleware tasks, including automating database backups, platform upgrades, software updates, and application deployments. We leverage Development Operations (DevOps) methodologies in non-cloud environments and have experience with automation tools such as Ansible, Puppet, Chef, and other automation frameworks used to achieve automation. Propelled Technologies LLC has also implemented continuous integration and continuous delivery (CI/CD) processes for database and middleware projects in the past. We have automated the testing and deployment of database and middleware changes using CI/CD pipelines and have experience utilizing Infrastructure as Code (IAC) tools for database and middleware projects to ensure consistent and repeatable infrastructure setup.

Compliance

Our team is well-versed in implementing solutions that require scaling up or down of database and middleware technologies. We also have experience in optimizing database technologies for better performance, including improving query speed, reducing latency, and increasing throughput. We understand the importance of security controls to protect data across multiple middleware and database technologies following FISMA and relevant regulations to ensure government compliance. Propelled Technologies LLC has experience authoring documentation to satisfy System Security Privacy Plan (SSPP) Federal Information Security Management Act (FISMA) control requirements for database and middleware infrastructure environments. We have implemented backup and recovery solutions, including integration with application aware data protection platforms for multiple database technologies, and our practices adhere to industry-wide and government compliance requirements.

Cloud Migration

Propelled Technologies LLC is a database services provider with extensive experience in implementing solutions that require support for multiple database technologies. Our team has successfully completed projects involving Oracle, MySQL, Microsoft Structured Query Language (MSSQL), Mongo Database (DB), and other database technologies. We also have experience migrating from one database technology to another, as well as data migration from on-premises solutions to Amazon Web Service (AWS) Cloud.
